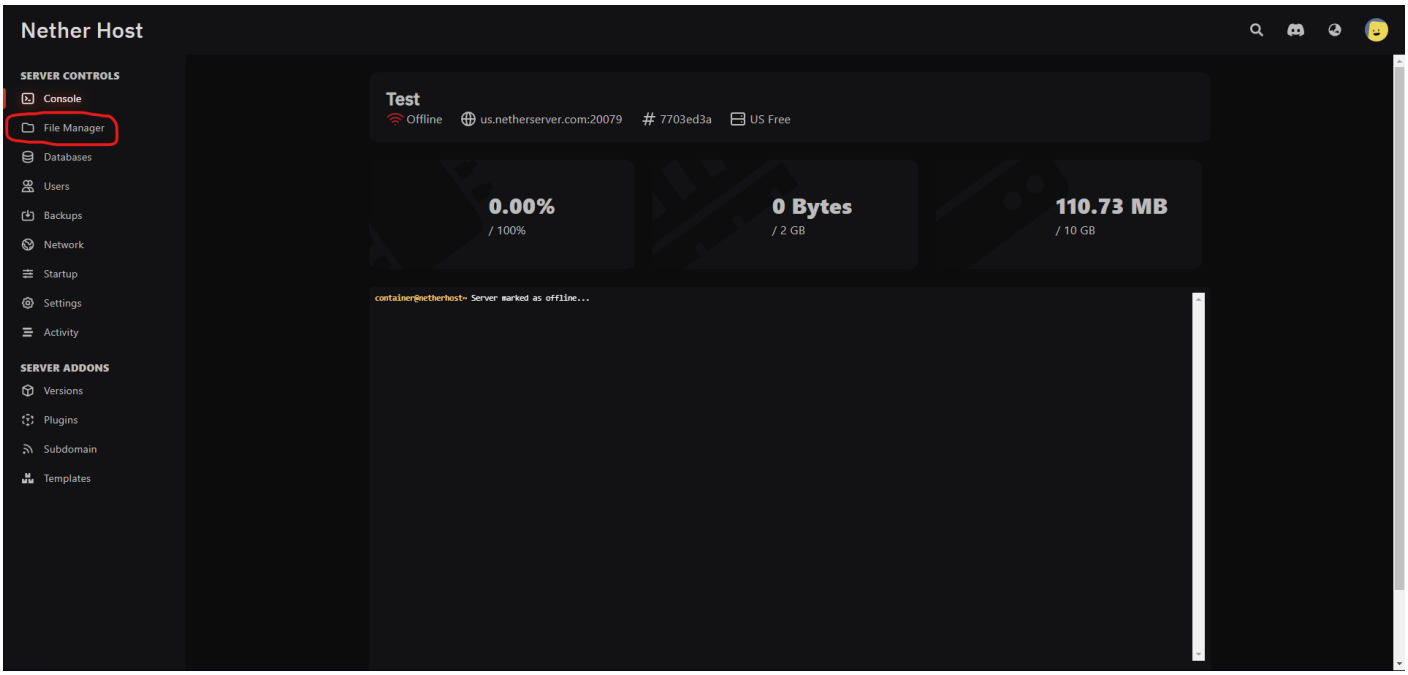
Adding Plugins (Java)

How to add plugins to a Java Minecraft server

Adding Plugins

This will teach you how to add plugins to your Minecraft: Java Edition server.

1. Make sure you have software running the Bukkit API, such as Spigot, Paper, or Purpur
2. Visit the Nether Host Panel and log in.
3. Download the plugins you would like, either from SpigotMC or Bukkit
   - *If you would also like, we have a built-in plugin installer*
4. Return to the panel, and select "Manage" on the server you want to install plugins on.
   - **Make sure you start, then stop your server before continuing.**
5. On the left-hand side of the screen, select "File Manager"



6. After selecting this, locate the `plugins` folder and enter it
7. Drag all the files you downloaded into the `plugins` folder
8. Return to your server's console
9. Restart the Server
10. Ensure all of the plugins have started correctly to prevent bugs and crashes

> If you run into any errors, feel free to join our **Discord Server** and open a ticket

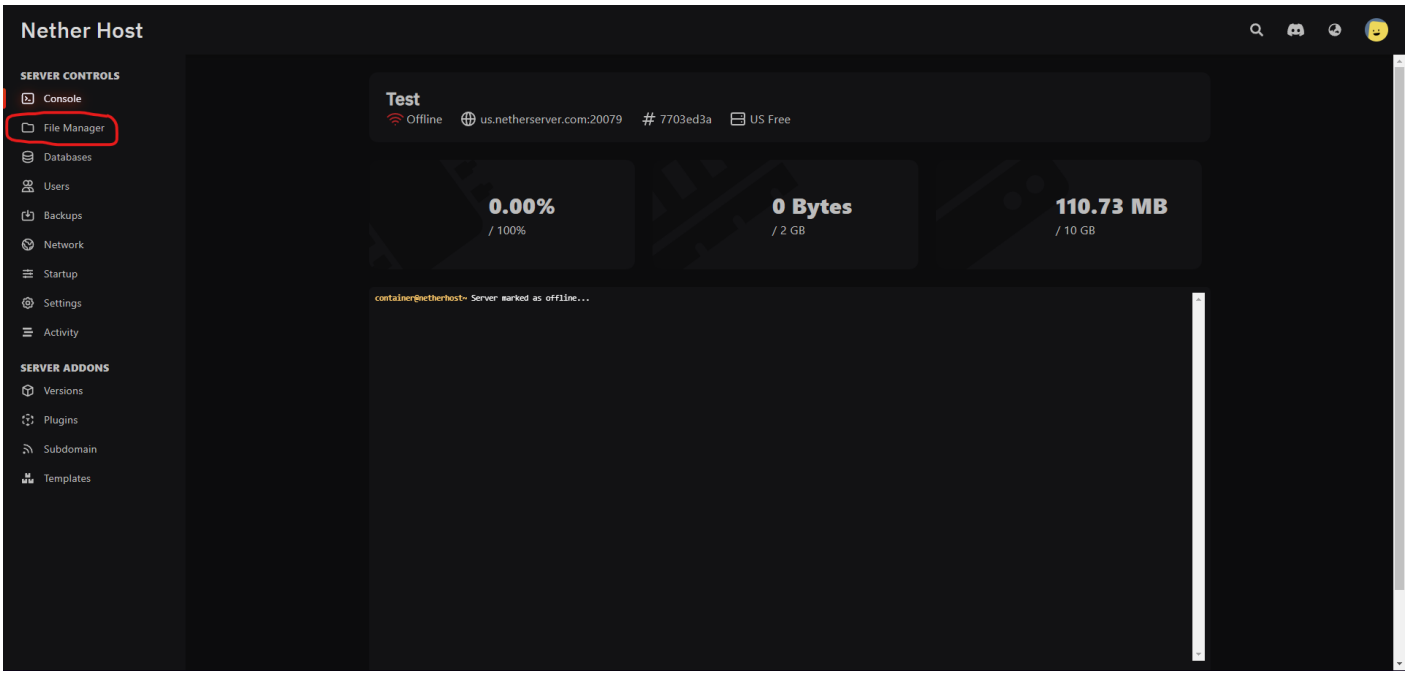
Adding Plugins (Bedrock)

How to add plugins on Minecraft Bedrock

Adding Plugins

This will teach you how to add plugins to your Minecraft: Bedrock Edition server.

1. Make sure you have software running the PocketMineMP
2. Visit the Nether Host Panel and log in.
3. Download the plugins you would like, from Poggit
   - *If you would also like, we have a built-in plugin installer*
4. Return to the panel, and select "Manage" on the server you want to install plugins on.
   - **Make sure you start, then stop your server before continuing.**
5. On the left-hand side of the screen, select "File Manager"



6. After selecting this, locate the `plugins` folder and enter it
7. Drag all the files you downloaded into the `plugins` folder
8. Return to your server's console
9. Restart the Server
10. Ensure all of the plugins have started correctly to prevent bugs and crashes

Adding Mods (Java)

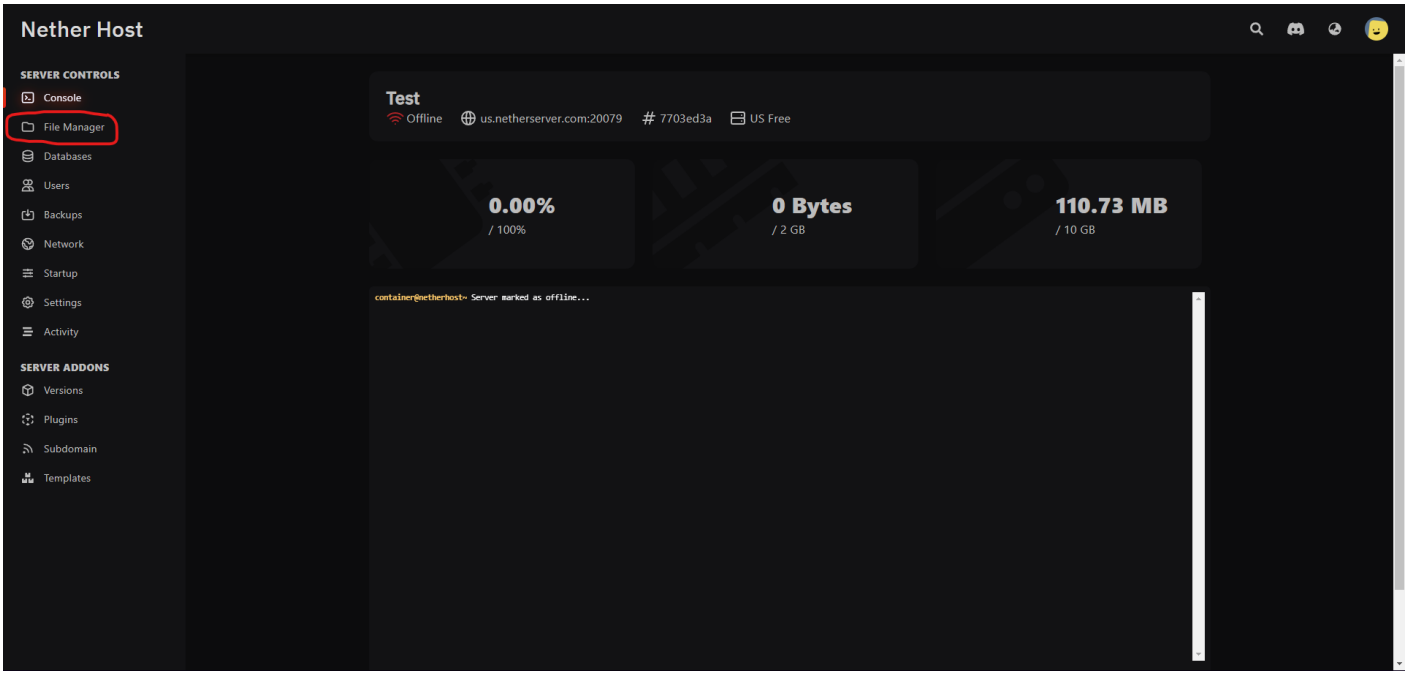
How to add mods on your Java server

Adding Mods

This will teach you how to add mods to your Minecraft: Java Edition server.

> Remember, when running a modded server, you must install the same mods on **both** the **client and server**!

1. Make sure you have software running a Mod API, such as Forge or Fabric
2. Visit the Nether Host Panel and login.
3. Download the plugins you would like, either from Modrinth or CurseForge
4. Return to the panel, and select "Manage" on the server you want to install mods on.
   - **Make sure you start and then stop your server before continuing.**
5. On the left-hand side of the screen, select "File Manager"



6. After selecting this, locate the `mods` folder and enter it
7. Drag all the files you downloaded into the `mods` folder
8. Return to your server's console
9. Restart the Server
10. Ensure all of the plugins have started correctly to prevent bugs and crashes

> If you run into any errors, feel free to join our **Discord Server** and open a ticket

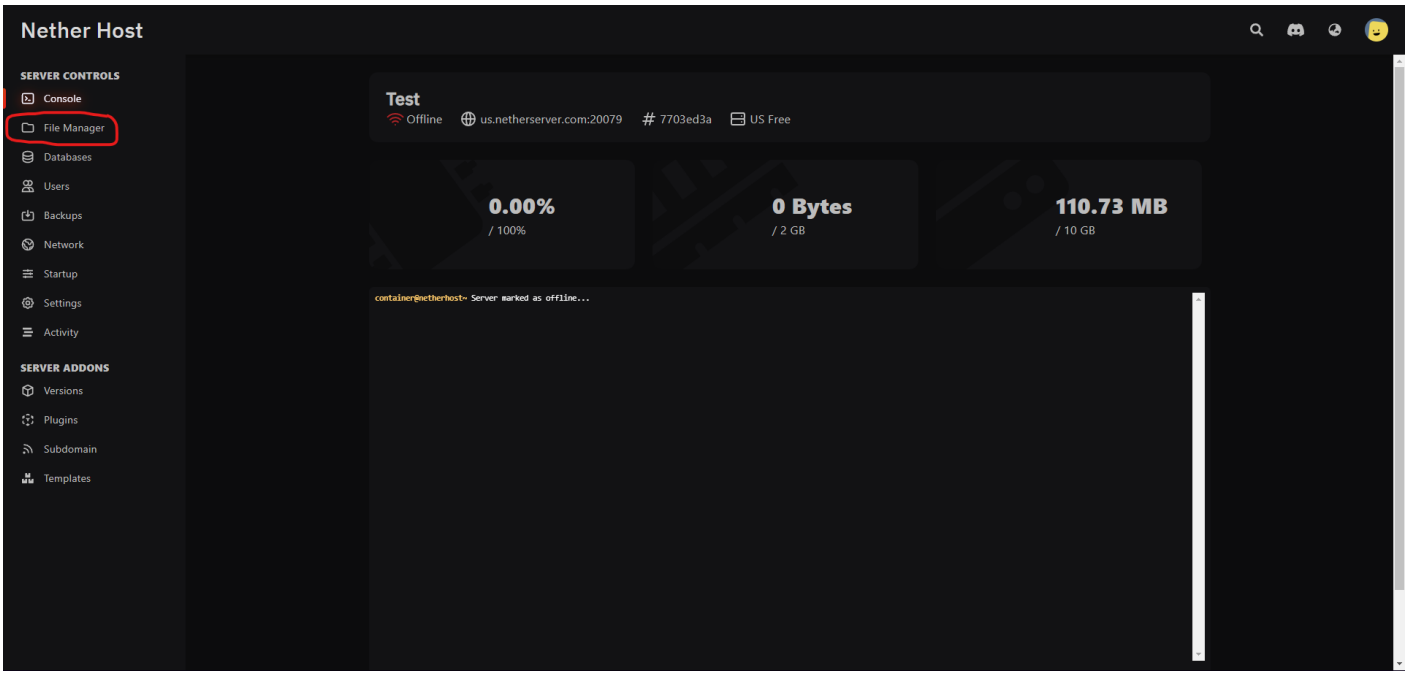
Adding Mods (Bedrock)

How to add mods (or behavior packs) to Minecraft Bedrock

Adding Mods

This will teach you how to add mods to your Minecraft: Bedrock Edition server.

1. Make sure you have either vanilla Minecraft Bedrock, or PocketMineMP
2. Visit the Nether Host Panel and login.
3. Download the mods you would like, from MCPEDL
   - **If needed, make sure you install the Resource Packs and Behavior Packs**
4. Return to the panel, and select "Manage" on the server you want to install packs on.
   - **Make sure you start and then stop your server before continuing.**
5. On the left-hand side of the screen, select "File Manager"



6. After selecting this, locate the `behavior_packs` folder and enter it
7. Drag all the files you downloaded into the `behavior_packs` folder
8. If needed, do the same for resource packs.
9. Return to your server's console
10. Restart the Server
11. Ensure all of the plugins have started correctly to prevent bugs and crashes
